

Custom Solutions

Our solutions are purpose built for modern supply chains, but we know one size does not fit all.

INTRODUCING: CUSTOM SOLUTIONS

Your IT department can do anything – but not everything. Our modular platform aggregates data from disparate systems to drive a unified understanding of your entire supply chain.

Traverse's customers leverage our custom solutions to improve operational efficiencies across their supply chains. Together, we can build a custom solution that fits your business needs like a glove.

We can custom configure your existing platform to support your unique business needs.

You know what needs to get done, but finding time to make it happen is a whole other matter. Talk to us about putting your ideas into action, today.

Get started.

Contact Barry Garvin for more information at barry@traversesystems.com or 281-340-2034.

Put Our Custom Solutions to Work For You

Turn business problems into business opportunities. We can create a custom solution for your company with the functionalities and features listed, or build something completely customized to your needs.

✓ Custom Scorecards (Merchant, Vendor, and Import)

Your business strategy is unique. Your scorecards should reflect that. Our custom scorecards enable your business to track and score merchants, vendors, or importers in ways specific to your business goals. We build the bridge between your business strategy and your vendors' performance so that you can achieve your best results.

✓ Comprehensive Supply Chain Visibility

Never ask yourself 'where's my stuff?' again. Get up-to-date and custom purchase order visibility from vendor to store and every stop in-between. When you and your stakeholders see the same information, you're more likely to arrive at the same conclusions.

✓ Promotional Purchase Order Tracking (PO)

Associate orders with promotional events for more detailed tracking and reporting. Find out how fill rates affected your last promotion, which vendors perform the best on promotional orders, and more. Pair promotional PO tracking with comprehensive supply chain visibility to instantly know which items are most at-risk so you can take proactive measures.

✓ Vendor Classification

Your audit resources are constrained. Spend less time auditing near-perfect vendors and more time auditing at-risk vendors. Precisely target specific items, departments, and other situations based on business need. Integrate your vendor classification system with material handling systems to divert cartons to a dedicated audit area within the DC.

✓ Deductions Management

Automatically manage deductions with ease. Turn the imprecise art of managing deductions into a science. Close the loop on your negotiated agreements with functionalities for supplier cooperative funding, supplier markdowns, supplier price protection, damage allowances, new or remodel store allowances, advertising allowances, and more.

✓ Supply Chain Alerts

User configurable, automated email, and SMS notifications triggered by the events you identify. Don't wait for bad news to find you. Proactively monitor your supply chain and immediately alert all stakeholders at the first sign of trouble.

✓ Landed Costs Reporting

Gain end-to-end visibility and management capabilities for import shipments from time of booking to time of deconsolidation in the US. Vendors can also upload delivery order documentation, manifests, and other documents and associate these documents with their respective containers.

Increased Performance . . . at a Price You Can Afford.
